

How to run a Claude Teaches Claude class

Three steps. The AI teaches from the file. You run the room.

1. Go to dmpgh.com/teach and download a class file.

Start with AI 101. Press "Class file" on the class card. The page's own instructions are below.

How it works

Each class is one file. Paste it into Claude, say you are the operator, and it teaches a seventy-five minute class in seven blocks — including a live demonstration and fifteen minutes of real questions.

- 1 **Download the class file** for the night you are running.
- 2 **Open Claude** — the app, or claude.ai in a browser — and start a new chat.
- 3 **Paste the whole file in**, then type this underneath:

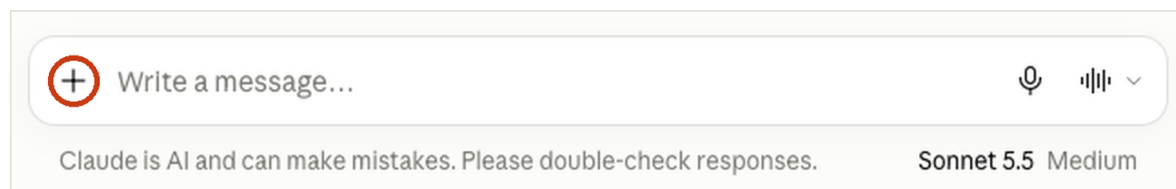

You are teaching this class. I am the operator. Start at Block One.

- 4 **Read the room setup checklist** at the top of the file. Some classes need something arranged beforehand — a volunteer, a connector, a printed handout.

Running more than one? Make a Claude Project, upload all ten files to its knowledge once, and set the project instruction. After that you just say "Teach AI 103. Start at Block One." Nothing to paste, ever again. The exact instruction text is in the Start Here guide at the bottom of this page.

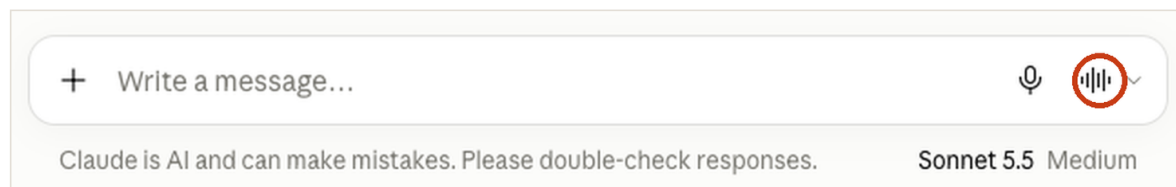

2. Open Claude and load the class.

Start a new chat. Press the + button (circled) and attach the class file, or paste the whole file in. Then type: You are teaching this class. I am the operator. Start at Block One.

3. Once the class is loaded, press the voice button and talk.

The wavy-lines button (circled) is conversational mode. Claude teaches out loud and hears you. Repeat every audience question into the phone so it can hear the room.

Running more than one class?

Make a Claude Project called "Claude class", upload all ten files to it once, and set the instruction from the Start Here guide at the bottom of the teach page. Then just open the project and say: Teach AI 103. Start at Block One.
